

People, processes and AI in one application.

Connect business processes, collaboration and automation.
From the first request to the outcome, with clear rules and visibility of work.

Shared data. Clear responsibilities. Traceable results.

One platform for your entire business.

01

Shared context for every task

Requests, documents, tasks and discussions stay connected. Everyone knows what to do and why.

02

Collaboration without delays

Shared data, changes and live dashboards connect internal teams and suppliers.

03

Grows with your organisation

Start with one business process. Add more solutions on the same platform as your needs grow.

From idea to outcome in one application

Data capture → Planning and processes → Execution and control → Reports, analysis, improvements

Solutions that work together

Start with what your business needs.

Choose your first business process. Add more with shared data, rules and dashboards.

Service Desk and ITSM

Requests, incidents, service catalogues and SLAs. Support for users and customers.

Demand, projects and capacity

From ideas and analysis to resource planning, tasks and delivery.

CRM and sales processes

Customers, opportunities, quotes and contracts in context.

CMDB and asset management

Physical, digital and cloud assets. Lifecycles and relationships to services.

Quality and testing

Test cases, test execution and defects linked to requirements.

Audit and compliance

Obligations, risks, measures and evidence. A clear, demonstrable compliance status.

AI as part of your processes

Agents work with business data and build on people's work directly in the application.

Native workflow support

Create tasks for any object, review changes visually and enforce follow-up actions.

Rules and security

Defined permissions, controlled data access and an audit trail of every action. Granular API security.

The model that suits your needs

Choose an LLM to suit your security, cost and operational needs. Local models are also supported.

A shared foundation for every solution

Adapt to your processes

Configure forms, data and workflows on the Eller platform, with the option to extend it yourself.

Role-based visibility

Permissions, shared documents, change history, reporting and dashboards.

Integrate with your environment

Connect other systems through APIs. Cloud or on-premises deployment.

Phased implementation

Preconfigured modules and methods. Expand gradually as your organisation's needs evolve.

Let's discuss where Conclusion can help your business.
